Because of limited testing capacity, the number of cases detected through testing represents only a small portion of the total number of likely cases in the County. COVID-19 data are reported as timely, accurately, and completely as we have available. Data are updated as we receive information that is more complete and will change over time as we learn more. Cases are lab-confirmed COVID-19 cases reported to San Mateo County Public Health by providers, commercial laboratories, and academic laboratories, including reporting results through the California Reportable Disease Information Exchange. A lab-confirmed case is defined as detection of SARS-CoV-2 RNA in a clinical specimen using a molecular amplification detection test. Cases are counted by episode date; episode date is defined as the earliest of: case symptom onset date, sample collection date, date of laboratory result, or date of death. Deaths reported in this dashboard include only San Mateo County residents; death data last updated December 7, 2020.

## San Mateo County COVID-19 Hospital Data

Data up to and including December 7, 2020

These data are a snapshot of the capacity of all hospitals reporting data in San Mateo County. Because of the normal fluctuation in the number of patients seen and cared for in hospitals, it's not uncommon for these data to vary from day to day. Sometimes hospitals do not report daily updates; in those cases, we use data from the previous report data for non-reporting hospitals. The data contained here may also include patients who are the State's responsibility under the prison system and other programs, and may not necessarily reflect hospitalizations of San Mateo County residents.

# SMC Health Officer Statement

"...Our collective best course of action: No gatherings outside of immediate households, use facial coverings extensively, and social distancing. And during this surge these are the additional things you should be doing: Stop moving around, stay at home except for essential (please observe the most restrictive definition of what you deem to be essential) activities, avoid all travel that is not essential, never enter an indoor environment without a mask if that environment has people outside your household, get tested if you have symptoms or are concerned, and isolate yourself IMMEDIATELY from your family and others if you have symptoms."

*Scott Morrow, MD, MPH, MBA  
San Mateo County Health Officer*

## California can stop the spread

Currently in pilot at the University of California. Available statewide December 10th.

# Safer Holidays and Travel

Nonessential travel, including holiday travel and vacations, are not recommended.

You can travel for urgent matters or if such travel is essential to your permitted work.

Do not travel if you are sick, with someone who is sick, or if someone in your household has had COVID-19 in the last 2 weeks.

If you travel outside the Bay Area, it is recommended that you self-quarantine for 14 days after your return.
